for Trolly Cars,

Shooting Galleries.

NOTICE—In your correspondence with us, please specify Catalogue No. 3.

MANY people "take it for granted" that a portable house can be no other than a light, flimsy "make-shift" of a house, with but a little more protection from the weather than a good tent. In the early days of manufacturing portable houses this supposition may have been true. Today, however, profiting by the mistakes of others, with new and advanced ideas regarding construction, and with modern wood working machinery, we can, and do, offer to the public a *first-class* Patented Portable House, strong, durable, wind and water-proof, ornamental in design and reasonable in price, saving the purchaser much in the waste of time and materials, as well as all the annoyance of building. The M. & M. houses are made from a good grade of white pine, primed with one coat of paint outside. The side walls are made in sections 3 feet 2 inches wide from $\frac{3}{4}$ inch siding, tongued and grooved, each being a duplicate of the other, and all being **interchangeable.** For shipment these sections are put up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting a house can arrange the windows and doors to suit his requirements. The height of the sections is 6 feet 6 inches or 7 feet 6 inches. We recommend to those intending to purchase one or more of our No. 04, or larger cottages, to order them with $7\frac{1}{2}$ foot side walls, instead of $6\frac{1}{2}$ foot. for two reasons. First: In case you want a porch the $7\frac{1}{2}$ foot walls would allow for the proper pitch for porch roof, while the $6\frac{1}{2}$ foot walls would not. Second: The $7\frac{1}{2}$ foot walls give a more pleasing proportion, better ventilation inside, and a much improved appearance to the house viewed from the outside. We furnish porches for our houses when desired. See pages 28 and 29.

WINDOWS.—The opening for the windows is 2 feet 5⅞ inches by 3 feet 3 inches; The sash is 1⅛ inches thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts can not be lost in transit, and the windows can be easily and quickly adjusted in their proper positions.

DOORS.—The doors are 2 feet 6 inches by 6 feet 2 inches. 1⅛ inches thick, 5-paneled complete with steel mortise lock and key, and hung with loose joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts can not be lost in transit, and the doors can be easily and quickly adjusted in their proper positions.

FLOOR.—The floor is made in sections of ⅞ in. matched pine, laid upon sized and fitted joists which rest in iron stirrups attached to the sills.

ROOF.—All our roofs, excepting the No. 0 Play House, are of our new design (see page 25), made of wood covered with canvas and thoroughly painted. They are made in sections in sizes easily handled, and when placed in position are tight and rain-proof. They are put up in crates for transportation.

PARTITIONS.—The partitions extend from floor to roof, so that each room is entirely shut off from the other. The upper part of the partition conforms to the shape of the roof, making a solid truss support for same. The lower part which is in sections the height of side walls, can be removed and replaced at will. The doors of partitions are 5-paneled and are complete with butts and latch.

NO NAILS.—No nailing or carpenter work necessary. A screw driver and wrench are all the tools required in erecting the houses.

NO CARPENTER.—Any one who follows our instructions can easily and quickly erect our houses. We send all purchasers printed illustrated instructions.

SCREENS.—We furnish, when desired, wire screens fitted to the windows; also screen doors complete with spring hinges.

We do not make any houses to exceed four panels in width (12 feet 8 inches) but can make any length desired by simply adding more panels. **All of our houses are one story in height.** Do not overlook the most important feature in the construction of our houses, viz.: THE VALUE IS ALWAYS THERE. Should you at any time desire to sell, you are not obliged to dispose of the land on which the house stands. You sell the house only. The purchaser simply takes it down section by section without the slightest injury whatever to the house, and can erect it where he chooses; the house, after being erected by the purchaser, is in as good condition as before. Very truly yours,

MERSHON & MORLEY CO.

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.

OUR No. 3 M. & M. Portable Automobile Houses are in good demand, and our customers are highly pleased with them. Our method of construction saves the purchaser a large percentage of what would be paid to a carpenter for building the same sized house of the same class of materials throughout. Not only this, but it does away with the annoyance of building. We ship these houses complete in every detail, and upon reaching their destination they can be erected ready for use in less than a day. If one is living in rented property and moves, the house can be taken down and re-erected without the slightest injury to it. The weight of this house is reduced to a minimum, and it can be taken to seaside or other resorts, where one might not find suitable accommodation for an automobile. This house is made entirely of white pine, and primed outside with one coat of paint. The side walls are made in sections 3 ft. 2 in. wide, from $\frac{3}{4}$ inch siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** The height of the sections is 6 ft. 6 in. and 7 ft. 6 in. Automobiles having tops require $7\frac{1}{2}$ ft. side walls. For shipment these sections are put up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors. This house has fancy shingle gables, fancy facial board, and is ornamental.

WINDOWS.—The window in the front gable, as shown in the cut on opposite page, has an opening 21 inches by 20 inches, with a $1\frac{1}{8}$ inch thick one light sash, glazed with 16x18 glass, hung with loose joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts can not be lost in transit, and the window can be easily and quickly adjusted in its proper position. The window swings into the house and back against the gable. If large windows for the walls of the house are desired, we merely substitute a window panel in place of the solid panel, at a small additional cost.

DOORS.—The large double doors in the front end of the house are hung with heavy iron hinges and furnished with hasp hook and staple. The frame for these double doors is provided with two portable gang planks, made of hardwood and ironed, for running the vehicle in and out of the house. If regular 5 panel doors for the side walls or rear end of house are desired, we merely substitute a door panel in place of the solid panel, at a small additional cost.

FLOOR.—The floor is made in sections of $\frac{7}{8}$ inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF.—The roof is our new design (see page 25), made of wood covered with canvas and thoroughly painted. They are made in sections in sizes easily handled, and when placed in position are tight and rain-proof. They are put up in crates for transportation.

NO NAILS.—No nailing or carpenter work necessary. A screw driver and wrench are all the tools required.

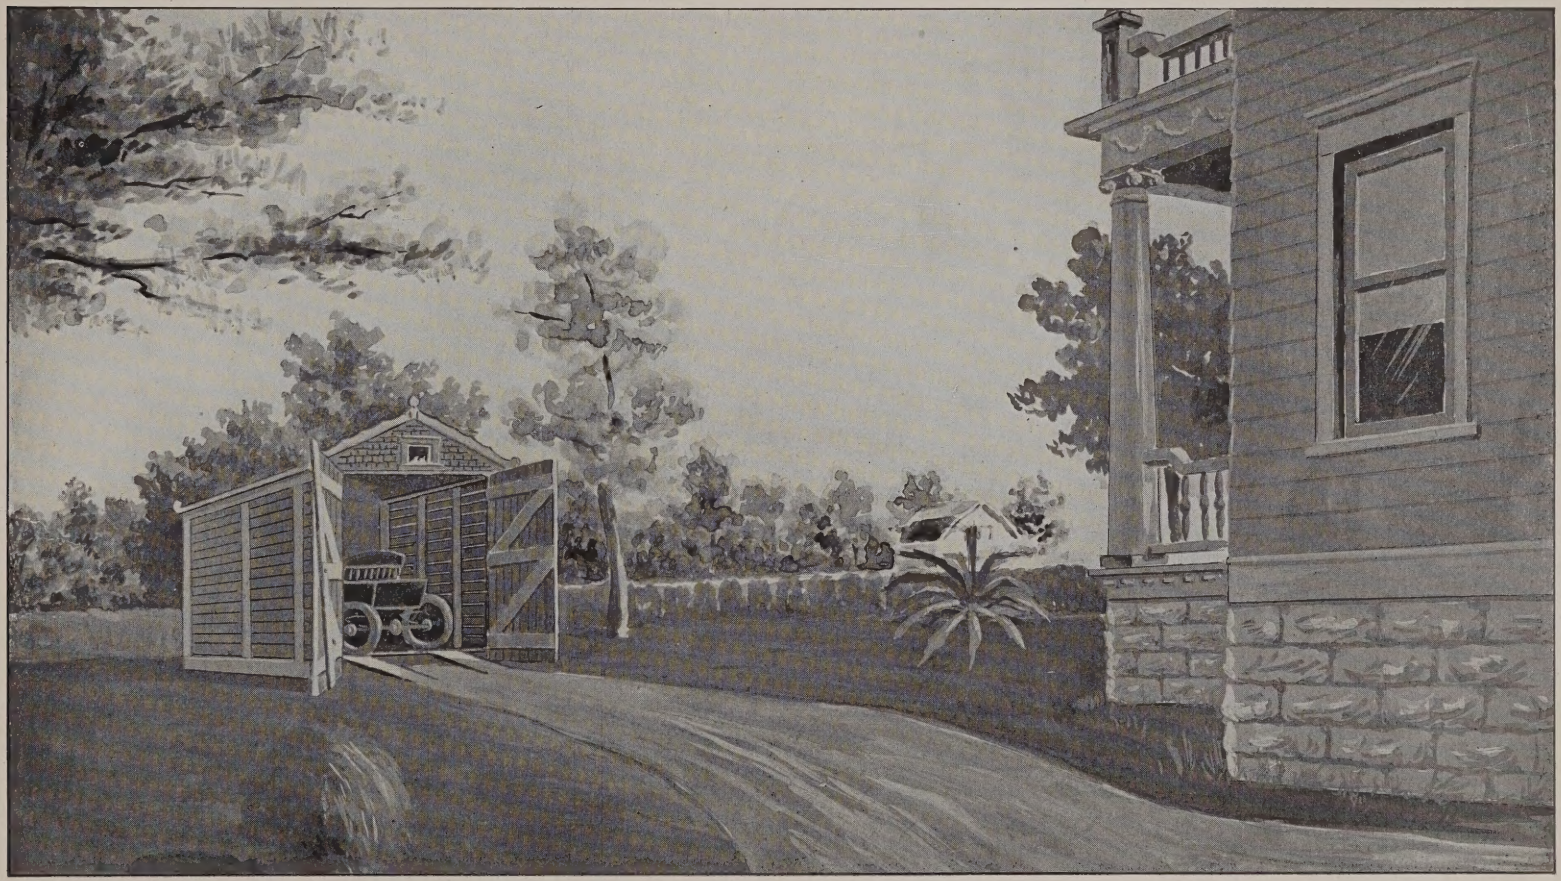
NO CARPENTER.—Any one who follows our instructions can easily and quickly erect our houses. We send all purchasers printed illustrated instructions.

In naming quotation on this house we regularly quote as follows:

No. 3. FOR A RUNABOUT.—Size of house 9 feet 6 inches by 9 feet 6 inches; primed with one coat of paint outside; our new design of wooden roof canvas-covered and painted; single $6\frac{1}{2}$ ft side wall panels; large double doors in front end (as shown in cut); fancy shingle gable; gable window; fancy facial board and portable gang planks.

The side wall panels are $6\frac{1}{2}$ ft. high from top of sill to bottom of gable, 8 ft. 9 in. from floor to point of gable. One can have $7\frac{1}{2}$ ft. high side wall panels, if so desired, which would give $7\frac{1}{2}$ ft. from top of sill to bottom of gable, and 9 ft. 8 in. from floor to point of gable. Vehicles having tops require $7\frac{1}{2}$ ft. side walls.

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.



No. 3 M. & M. PORTABLE AUTOMOBILE HOUSE. Size 9 ft. 6 in. by 9 ft. 6 in. with 6½ ft. high side wall panels. Showing large double doors in the front and fancy shingle gable, gable window, fancy facial board and portable gang planks.

OUR No. 4 and 5 M. & M. Portable Automobile Houses are in still greater demand than our No. 3, For general description of construction, etc., see page 6, describing our No. 3 Automobile House.

WINDOWS.—The window in the front gable, as shown in the cut on opposite page, has an opening 21 inches by 20 inches, with a 1⅛ inch thick one light sash, glazed with 16x18 glass, hung with loose joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts can not be lost in transit, and the window can be easily and quickly adjusted in its proper position. The window swings into the house and back against the gable. If windows for the walls of the house are desired, we merely substitute a window panel in place of the solid panel, at a small additional cost.

DOORS.—The large double doors in the front end of the house are hung with heavy iron hinges and furnished with hasp hook and staple. The frame for these double doors is provided with two portable gang planks, made of hardwood and ironed, for running the vehicle in and out of the house. If regular 5 panel doors for the side walls or rear end of house are desired, we merely substitute a door panel in place of the solid panel, at a small additional cost.

FLOOR.—The floor is made in sections of ⅞ inch matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF.—The roof is our new design (see page 25), made of wood covered with canvas and thoroughly painted. They are made in sections in sizes easily handled, and when placed in position are tight and rain-proof. They are put up in crates for transportation.

NO NAILS.—No nailing or carpenter work necessary. A screw driver and wrench are all the tools required.

NO CARPENTER.—Any one who follows our instructions can easily and quickly erect our houses. We send all purchasers printed illustrated instructions.

In naming quotation on these houses we regularly quote as follows:

No. 4. FOR A STANHOPE OR TWO-SEATED VEHICLE.—Size of house 9 feet 6 inches in width by 12 feet 8 inches in length; primed with one coat of paint outside; our new design of wooden roof canvas covered and painted; single 6½ ft. side wall panels; large double doors in front end (as shown in cut); fancy shingle gable; gable window; fancy facial board, and portable gang planks.

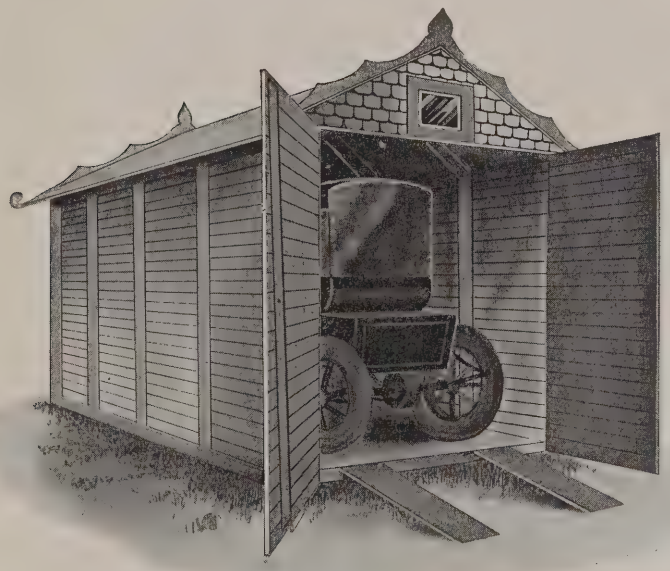
The side wall panels are 6½ ft. high from top of sill to bottom of gable, 8 ft. 9 in. from floor to point of gable. One can have 7½ ft. high side wall panels, if so desired, which would give 7½ ft. from top of sill to bottom of gable, and 9 ft. 9 in. from floor to point of gable. Vehicles having tops require 7½ ft. side wall panels.

No. 5. FOR TONNEAU TOURING CAR.—Size of house 9 ft. 6 in. in width by 15 ft. 10 in. in length; primed with one coat of paint outside; our new design of wooden roof canvas covered and painted; single 6½ ft. side wall panels; large double doors in front end (as shown in cut); fancy shingle gable; gable window; fancy facial boards, and portable gang planks; two windows, one on each side of the house, and a small door in the rear.

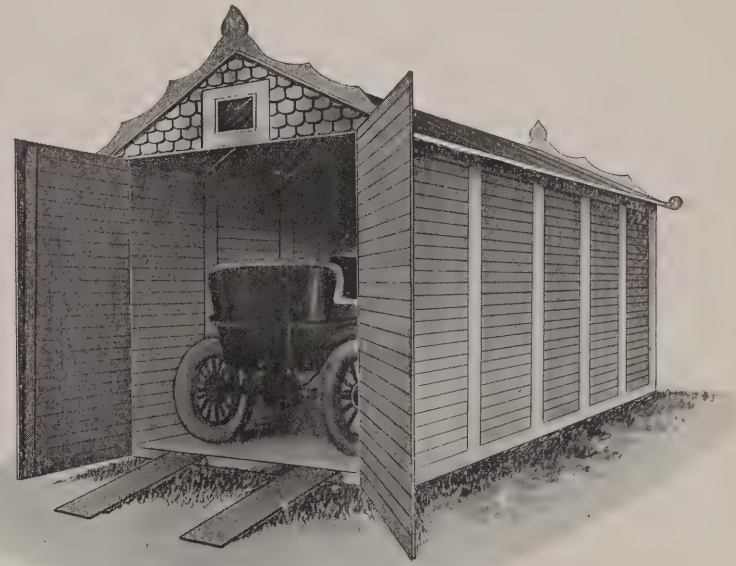
The side wall panels are 6½ ft. high from top of sill to bottom of gable; 8 ft. 9 in. from floor to point of gable. One can have 7½ ft. high side wall panels if so desired, which would give 7½ ft. from top of sill to bottom of gable, and 9 ft. 9 in. from floor to point of gable. Vehicles having tops require 7½ ft. side walls.

Where room is required for two vehicles, we can arrange this house so as to have large double doors on each end of the house, so that the machines may be run in or out of the house from either end; with a fancy gable and gable window; fancy facial boards and portable gang planks for each end: two windows, one on each side of the house, and a small door on one side of the house, if so desired.

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.



No. 4 M. & M. Portable Automobile House. Size 9 feet 6 inches in width by 12 feet 8 inches in length, with 7½ foot high side wall panels, showing large double doors in the front and fancy shingle gable, gable window, fancy facial board and portable gang planks.



No. 5 M. & M. Portable Automobile House. Size 9 feet 6 inches in width by 15 feet 10 inches in length, with 7½ foot high side wall panels, showing large double doors in the front and fancy shingle gable, gable window, fancy facial board and portable gang planks.

OUR No. 6 M. & M. Portable Automobile House is used when two or more machines are stabled under the same roof For general description of construction, etc., see page 6, describing our No. 3 Automobile House.

WINDOWS.—The window in the front gable, as shown in the cut on opposite page, has an opening 21 inches by 20 inches, with a 1⅛ inch thick one-light sash, glazed with 16x18 glass, hung with loose joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the window can be easily and quickly adjusted in its proper position. The window swings into the house and back against the gable. If more windows for the walls of the house are desired, we merely substitute a window panel in place of the solid panel, at a small additional cost.

DOORS.—The large double doors in the front and rear ends of the house are hung with heavy iron hinges and furnished with hasp hook and staple. The frame for these double doors is provided with two portable gang planks, made of hardwood and ironed, for running the vehicles in and out of the house. If more regular 5-panel doors for the side walls of the house are desired, we merely substitute a door panel in place of the solid panel, at a small additional cost.

FLOOR.—The floor is made in sections of ⅞ in. matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF.—The roof is our new design (see page 25), made of wood covered with canvas and thoroughly painted. They are made in sections and sizes easily handled, and when placed in position, are tight and rain-proof. They are put up in crates for transportation.

NO NAILS.—No nailing or carpenter work necessary. A screw driver and wrench are all the tools required.

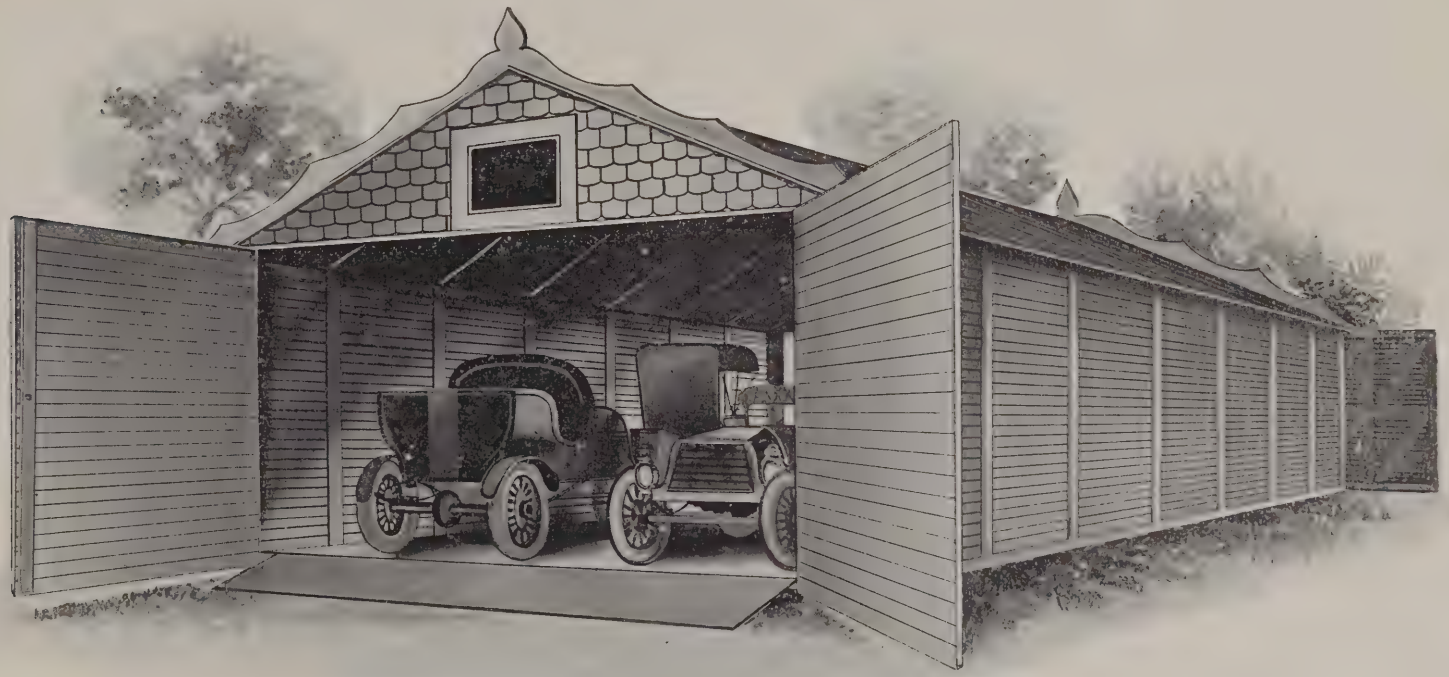
NO CARPENTER.—Any one who follows our instructions can easily and quickly erect this house. We send all purchasers printed illustrated instructions.

In naming quotation on this house, we regularly quote as follows:

No. 6. FOR STANHOPE, TOURING CARS AND RUNABOUTS.—Where two or more machines are stabled under the same roof. Size of house 12 ft. 8 in. in width by 22 ft. 2 in. in length; primed with one coat of paint outside; our new design of wooden roof canvas covered and painted; single 6½ ft. side wall panels; large double doors in both ends (as shown in cut); fancy shingle gables; gable windows; fancy facial boards, and portable gang planks; four windows, two on each side of the house, and a small door in the side of the house if so desired.

The side wall panels are 6½ ft. high from top of sill to bottom of gable; 9 ft 10½ in. from floor to point of gable. One can have 7½ ft. high side wall panels, if so desired, which would give 7½ ft. from top of sill to bottom of gable, and 10 ft. 10½ in. from floor to point of gable. Vehicles having tops require 7½ ft. high side wall panels.

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.



No. **6** M. & M. Portable Automobile House. Size 12 ft. 8 in. in width by 22 ft. 2 in. in length, with 7½ ft. side wall panels, showing large double doors in front and rear, fancy shingle gable, gable window, fancy facial boards and portable gank planks.

OUR No. 0 M. & M. Child's Portable Play House meets the demand for a smaller and lower-priced house than our No. 01. Aside from its smaller dimensions it is in every way equal to the No. 01 as regards strength, material and workmanship. The four panels comprising the sides of the house being of the same shape and dimensions, and a similar conformity existing between the four end or gable panels, the two sections forming the floor, the four sections forming the roof, it makes the entire house, when crated, a very simple and compact package for transportation, and can be easily carried on a light spring wagon. Size of house, 5 ft. in width by 6 ft. in length (inside measure); 7 ft. 7½ in. from bottom of sill to top of gable. The window, 16x29 in., has a two-light sash, with 12x14 glass, hung with loose joint wrought iron butts, and swings in when opened.

The four-panel door, 22 in. in width by 4 ft. 6 in. in height, is hung on 3x3 in. wrought iron loose joint butts; has a first-class knob lock and steel key. The house can be erected in a half hour and taken down in 10 minutes. **No nailing** or **carpenter** required. It is **strong, wind** and **water-proof,** made of white pine, and furnished with one coat of white paint on the body of the house, the roof being painted a very dark green, as is also the window sash. Our price for the house is by far cheaper than a carpenter can build one of the same dimensions and furnish the same material. The house being portable, if the children at any time want to go camping, it can be taken down, transported upon a light spring wagon or by rail, either as freight or baggage, and can be stored away in a small space during the winter months, if desired. We furnish printed instructions how to erect the house, the different parts being numbered. A good smart boy of 12 years can put up a house without any assistance. It is not a toy, but a strong, durable house, and we assure all purchasers that they will be more than pleased with it.

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.

No. 0 M. & M. Child's Portable Play House. Size 5 ft. in width by 6 ft. in length (inside measure.)

OUR No. 01 M. & M. Child's Portable Play House is more artistic in design than No. 0 and very attractive on the lawn. It is 9 ft. 6 in. in length by 6 ft. 4 in. in width, 8 ft. 9 in. from floor to point of gable. Made of a good quality of white pine, painted with one coat of white paint outside. The side wall panels are made in sections 3 ft. 2 in. wide, from $\frac{3}{4}$ in. siding, tongued and grooved, each being a duplicate of the other, and all being **interchangeable.** For shipment these sections are put up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting a house can arrange the windows and doors to suit his requirements. The height of the sections is invariably 6 feet 6 inches. We find one of the most acceptable ways of erecting the house is to put both the window and door in the front, as shown in the cut on opposite page, with a veranda section over the door and one over the window as rain and sun protectors. The veranda sections are the width of the wall panels, so that by using them across the front of the house, it makes a continuous veranda; but we sell a large percentage as shown in the cut. We frequently furnish one veranda section for over the door and outside blinds for the window. The house, when erected, is strong, durable, wind and water-proof, reasonable in price, saving the purchaser much in the waste of time and materials, as well as all of the annoyance of building.

WINDOWS.—The opening for the windows is 2 feet 5⅞ inches by 3 feet 3 inches. The sash is glazed with two lights 11x24, and four lights 5¾x8 inch glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions.

DOOR.—The door is 2 feet 6 inches by 5 feet 6 inches 1⅜ inches thick, 3-paneled, and a nine-light glazed sash complete with steel mortise lock and key, and hung with loose joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the door can be easily and quickly adjusted in its proper position.

FLOOR.—The floor is made in sections of ⅞ in. matched pine, laid upon sized and fitted joists which rest in iron stirrups attached to the sills.

ROOF.—The roof is our new design (see page 25,) made of wood covered with canvas and thoroughly painted. It is made in eight sections, which, when placed in position, are tight and rain-proof. They are easily handled, and put up in crates for transportation.

SCREENS.—We furnish this house, when so desired, with wire screens fitted to the windows; also screen doors complete with spring hinges, at a small extra cost.

NO NAILS.—No nailing or carpenter work necessary. A screw driver and wrench are all the tools required.

NO CARPENTER.—Any one who follows our instructions can easily and quickly erect this house. We send all purchasers printed illustrated instructions.

The number of doors and windows is a matter of choice. In naming quotation on this house, we always quote with one door, one window, two veranda sections, one for over the door and one for over the window, unless otherwise specified. Should more doors or windows be desired, we merely substitute a door or window panel in place of the solid panel, at a small additional cost.

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.

No. 01 M. & M. Child's Portable Play House. Size 9 ft. 6 in. in length by 6 ft. 4 in. in width. Showing one veranda section over the window and one over the door.

OUR No. 02 M. & M. Hunter's Cabin meets with a ready sale, for the reason that it is so perfectly adapted to the use of hunters and fishermen. With this house, regardless of weather, one can always be comfortable and free from the annoyance of insects. Both members of this firm are lovers of fishing and shooting, and can assure you that our Hunter's Cabin meets all the requirements, and is in every way practical. It is made entirely of white pine and primed with one coat of paint outside. Size of house, 9 ft. 6 in. in length by 6 ft. 4 in. in width, 8 ft. 9 in. from floor to point of gable. The side walls are made in sections 3 ft. 2 in. wide, from $\frac{3}{4}$ in. siding tongued and grooved, each being a duplicate of the other and all being **interchangeable.** For shipment these sections are put up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting a house can arrange the location of windows and doors to suit his requirements. The height of the sections is invariably 6 ft. 6 in. The total weight of the house, 1050 lbs. This house, when equiped with one of our Mershon & Morley Double Folding Portable Beds (see page 35), will accommodate two persons with abundance of room during the day when the beds are closed and not in use. The house requires very little more time to erect than a tent.

WINDOWS.—The opening for the windows is 2 ft. 5⅞ in. by 3 ft 3 in. The sash is 1⅛ in. thick, 4-light, glazed with 12x16 glass divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper position. Opening for gable window 21x20 in., with a one light sash 1⅛ in. thick, glazed with 16x18 in. glass, hung with loose joint wrought iron butts, and swings into the house back against the gable.

DOOR.—The door is 2 ft 6 in. by 6 ft. 2 in., 1⅛ in. thick, 5-paneled, complete with steel mortise lock and key, and hung with loose joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the door can be easily and quickly adjusted in its proper position.

FLOOR.—The floor is made in two sections of ⅞ in. matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF.—The roof is our new design (see page 25), made of wood covered with canvas and thouroughly painted. Made in eight sections and easily handled, which, when placed in position, are tight and rain-proof. They are put up in crates for transportatian.

GABLE.—The gable is equipped with a patent ventilator head for a stove pipe.

SCREENS.—We furnish this house, when so desired, with wire screens fitted to the windows; also screen doors complete with spring hinges, at a small extra cost.

NO NAILS.—No nailing or carpenter work necessary. A screw driver and wrench are all the tools required.

NO CARPENTER.—Any one who follows our instrustions can easily and quickly erect this house. We send all purchasers printed illustrated instructions.

The cut on the opposite page shows two windows, one door and a window in the gable; also shows the interchangeable side wall panel. The number of doors and windows is a matter of choice In naming quotation on this house, we regularly quote price with one door and one window and a patent ventilator head in the gable for a stove pipe, unless otherwise specified. Should more doors or windows be desired, we merely substitute a door or window panel in place of the solid panel, at a small additional cost.

If window for gable is wanted, it can be furnished at a small additional cost.

We make this house with double roof and double walls at an extra cost.

(See page 36.)

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.

No. 02 M. & M. Portable Hunter's Cabin. Size 9 ft. 6 in. in length by 6 ft. 4 in. in width. Showing two windows, one door, one gable window and interchangeable side wall panels. Cabin equipped with Mershon & Morley's double folding portable bed (see page 35). The gable window and the window in the side of the house, and the M. & M. double folding portable bed, as shown in the above cut, are **extras.** Our regular quotation on this house specifies only **one** window and one door. The **extras** we furnish at an additional cost.

OUR No. 03 M. & M. Hunters' Cabin is the same in every detail as No. 02 (see page 16), with the exception it has one more panel in width, making the house 9 ft. 6 in. square. It has the same number of roof panels as No. 02, but has 3 floor setions. This house, equipped with two of the Mershon & Morley Double Folding Portable Beds (see page 35), will accommodate four persons. Weight of house 1400 lbs.

The cut on the opposite page shows a window in the gable and a porch across the front of the house, composed of 3 veranda sections. We make these veranda sections so they can be used as awnings for the windows (see page 23), or by joining them together make a continuous veranda, each veranda section being the width of the side wall panel of the house, as shown in the cut.

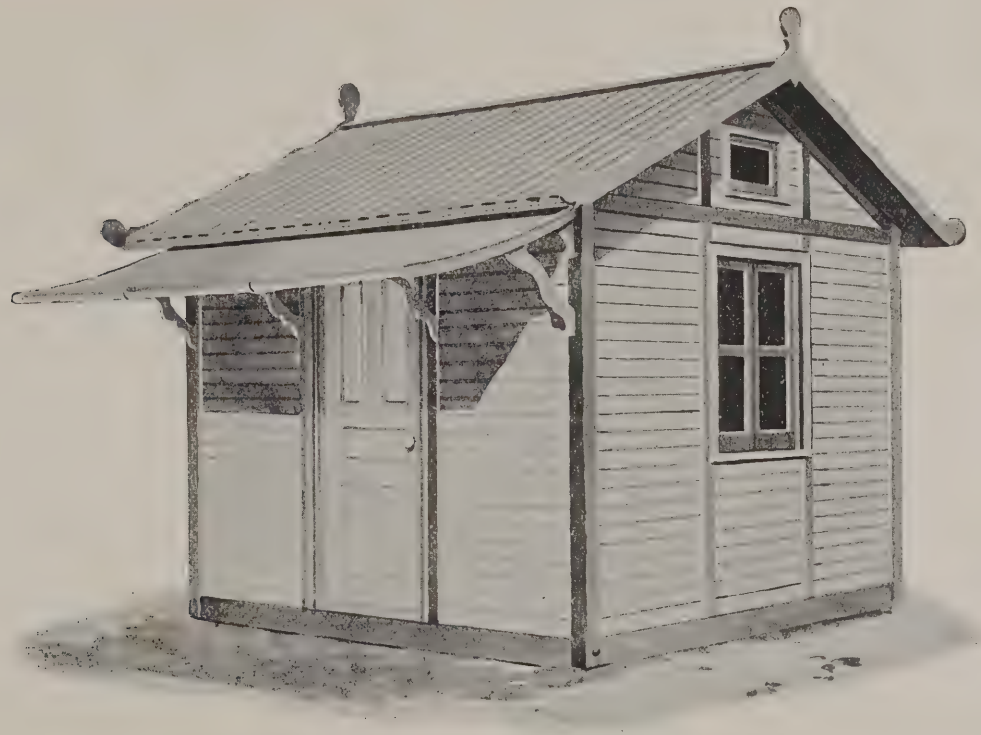
In naming quotation on this house we always quote with one window, one door and a patent ventilator head in the gable for a stove pipe, unless otherwise specified. Should more windows or doors be desired, we merely substitute a door or window panel in place of the solid panel at a small additional cost.

Wire Screens for the windows:—Wire screen doors complete with spring hinges, veranda sections, outside blinds, gable windows and portable beds are extras and not included in our quotations on this house, unless so specified.

We send all purchasers printed illustrated instructions for erecting the house.

We make this house with double roof and double walls, if so wanted, at an additional cost. (See page 36.)

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.



No. 03 M. & M. Portable Hunters' Cabin or One-Room Cottage. Size 9 ft. 6 in. by 9 ft. 6 in. Showing porch across the front composed of three veranda sections, window in the gable and fancy facial boards. The three veranda sections forming the porch across the front of the house, the window in the gable, and the facial boards, as shown in the above cut, are **extras,** and are not included in our regular quotation on this house. We furnish them at an additional cost. We can furnish this house with porch at an additional cost. (See pages 28 and 29.)

OUR No. 04 M. & M. two-room cottage is very popular, owing to its size and moderate price. It is made entirely of white pine and primed with one coat of paint outside. Size of house, 15 ft. 10 in. in length by 9 ft. 6 in. in width; 8 ft. 9 in. from floor to point of gable, with one room 9 ft. 6 in. by 9 ft. 6 in., and one room 9 ft. 6 in. by 6 ft. 4 in. Two windows, two doors, one partition with door; gable complete with patent ventilator head for stove pipe. The side walls are made in sections 3 ft. 2 in. wide, from ¾ in. siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** For shipment these sections are put up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting the house can arrange the location of the windows and doors to suit his requirements. The height of the sections is 6 ft. 6 in. or 7 ft. 6 in. We recommend to those intending to purchase one or more of our No. 04, or larger cottages, to order them with 7½ ft. side walls instead of 6½ ft. for two reasons. First: In case you should ever want to build a porch the 7½ ft. walls would allow for the proper pitch for the porch roof, while the 6½ ft. walls would not. Second. The 7½ ft. walls give a more pleasing proportion, better ventilation inside and a much improved appearance to the house viewed from the outside. The house, when erected, is strong, durable, wind and water-proof, reasonable in price, saving the purchaser much in the waste of time and materials, as well as all the annoyance of building.

WINDOWS.—The opening for the windows is 2 ft. 5⅞ in. by 3 ft. 3 in. The sash is 1⅛ in. thick, 4-light, glazed with 12x16 glass divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts can not be lost in transit, and the Windows can be easily and quickly adjusted in their proper positions.

DOORS.—The doors are 2 ft. 6 in. by 6 ft. 2 in., 1⅜ in. thick, 5-paneled, complete with steel mortise lock and key, and hung with loose joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the doors can be easily and quickly adjusted in their proper positions.

FLOOR.—The floor is made in sections of ⅞ in. matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF.—The roof is our new design see page 25, made of wood covered with canvas and thoroughly painted. Made in twelve sections in sizes easily handled, and when placed in position are tight and rain-proof. They are put up in crates for transportation.

PARTITION.—The partition extends from floor to roof so that each room is entirely shut off from the other. The upper part of the partition conforms to the shape of the roof, making a solid truss support for the same. The lower part, which is in sections the height of the side walls, can be removed and replaced at will. The door for partition is 5-paneled, complete with butts and latch.

NO NAILS.—No nailing or carpenter work necessary. A screw driver and wrench are all the tools required.

NO CARPENTER.—Any one who follows our instructions can easily and quickly erect the house. We send all purchasers printed illustrated instructions.

SCREENS.—We furnish for this house when desired, wire screens fitted to the windows; also screen doors complete with spring hinges.

OUTSIDE BLINDS.—We furnish for this house outside blinds for the windows complete with fastenings. See page 25.)

The cut on opposite page shows this house with two windows and two doors, a patent ventilator head for the stove pipe in the gable, and a porch, composed of five veranda sections across the entire front. In naming quotation on this house we regularly quote price with two windows, two doors, one partition with door. and a patent ventilator in the gable for a stove pipe, unless otherwise specified. Should more doors or windows be desired, we merely substitute a door or window panel in place of the solid panel, at a small additional cost.

WIRE SCREENS FOR THE WINDOWS.—Wire screen doors complete with spring hinges, veranda sections, outside blinds, gabel windows and M. & M. portable beds are EXTRAS and not included in our quotation on this house unless so specified.

We make this house with double roof and double walls at an extra cost.

(See page 36.)

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.

No. 04 **M. & M.** PORTABLE COTTAGE (2 rooms). Size 15 ft. 10 in. in length by 9 ft. 6 in. in width. One room 9 ft. 6 in. by 9 ft. 6 in.; one room 6 ft. 4 in. by 9 ft. 6 in. Showing porch across the front composed of 5 veranda sections and patent ventilator head in gable for stove pipe. The 5 veranda sections forming the porch across the front of the house, as shown in above cut, are **extra** and not included in our regular quotation on this house. We furnish them at an additional cost.

We can furnish this house with porch at an additional cost. See pages 28 and 29.

OUR No. 05 M. & M. 3-room cottage is more elaborate in design than our No. 04, having fancy shingle gable, gable ornaments and fancy ridge board on roof. It is made entirely of white pine and primed with one coat of paint outside. Size of house, 22 ft. 2 in. in length by 12 ft. 8 in. in width; 9 ft. 10½ in. from floor to point of gable, with one room 12 ft. 8 in. square, and two rooms 9 ft. 6 in. by 6 ft. 4 in.; 4 windows, 2 doors, 2 partitions with doors, and a galvanized iron roof joint for stove pipe. The side walls are made in sections 3 ft. 2 in. wide, from ¾ in. siding, tongued and grooved, each being a duplicate of the other and all being **interchangeable.** For shipment these sections are put up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that a purchaser erecting the house can arrange the location of the windows and doors to suit his requirements. The height of the sections is 7 ft. 6 in. The house, when erected, is strong, durable, wind and water-proof, reasonable in price, saving the purchaser much in the waste of time and materials, as well as all the annoyance of building.

WINDOWS.—The opening for the windows is 2 ft. 5⅞ in. by 3 ft. 3 in. The sash is 1⅛ in. thick, 4-light, glazed with 12x16 glass divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts can not be lost in transit, and the Windows can be easily and quickly adjusted in their proper positions.

DOORS.—The doors are 2 ft. 6 in. by 6 ft. 2 in , 1⅛ in thick, 5-paneled, complete with steel mortise lock and key, and hung with loose joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so these parts cannot be lost in transit, and the doors can be easily and quickly adjusted in their proper positions.

FLOOR.—The floor is made in sections of ⅞ in. matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF.—The roof is our new design (see page 25,) made of wood covered with canvas and thoroughly painted. Made in sixteen sections in sizes easily handled, and when placed in position are tight and rain-proof. They are put up in crates for transportation.

PARTITIONS.—The partitions extend from floor to roof, so that each room is entirely shut off from the other. The upper part of the partition conforms to the shape of the roof, making a solid truss support for the same. The lower part, which is in sections the height of the side walls, can be removed and replaced at will. The doors for partitions are 5-paneled, complete with butts and latch.

NO NAILS.—No nailing or carpenter work necessary. A screw driver and wrench are all the tools required.

NO CARPENTER.—Any one who follows our instructions can easily and quickly erect the house. We send all purchasers printed illustrated instructions.

SCREENS.—We furnish for this house when desired, wire screens fitted to the windows; also screen doors complete with spring hinges.

OUTSIDE BLINDS.—We furnish for this house outside blinds for the windows complete with fastenings. (See page 25.)

The cut on opposite page shows this house with four windows and two doors (see diagram upper right hand corner), and veranda sections over the windows and door, used as rain and sun protectors. In naming quotation on this house, we regularly quote price with four windows, two doors, two partitions with doors, fancy ridge board, fancy gable ornaments and galvanized iron roof joint for stove pipe, unless otherwise specified. Should more windows and doors be desired, we merely substitute a window or door panel in place of the solid panel, at a small additional cost.

WIRE SCREENS FOR THE WINDOWS.—Wire screen doors complete with spring hinges, veranda sections, outside blinds, gabel windows and M. & M. folding beds are EXTRAS and not included in our quotation on this house unless so specified.

We make this house with double roof and double walls at an extra cost. (See page 36.)

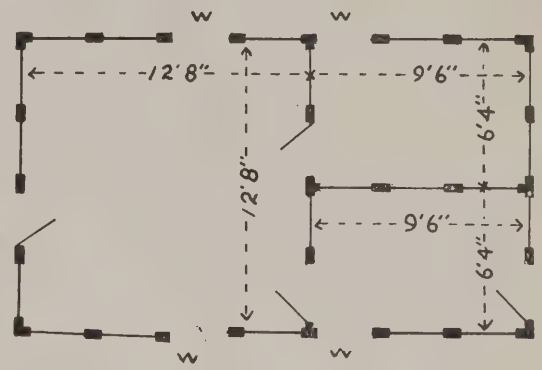
DIAGRAM.



Scale ⅛ inch to the foot.
The dotted lines give the dimensions of the rooms.
The heavy lines, thus, ▭——▭ show the exact positions of the side wall and partition panels.

No. 05 **M. & M.** Portable Cottage (3 rooms). Size 22 ft. 2 in. in length by 12 ft. 8 in. in width. One room 12 ft. 8 in. by 12 ft. 8 in.; two rooms 6 ft. 4 in. by 9 ft. 6 in. Showing fancy ridge board, fancy gable ornaments, veranda sections over the windows and doors as sun and rain protectors. The veranda sections or wooden awnings, as shown in this cut over the window and door, are **extra,** and not included in our regular quotation on this house. We furnish them at an additional cost. We can furnish this house with porch at an additional cost. (See pages 28 and 29.)

OUR No. 05 4-room M. & M. cottage is an ideal one for an inexpensive, comfortable as well as ornamental summer resort home for the lake, seaside or mountain. It is made entirely of a good grade of white pine, and primed with one coat of paint outside. Size of house, 12 ft. 8 in. in width by 31 ft. 8 in. in length; with one room 12 ft. 8 in. square, one room 12 ft. 8 in. in width by 9 ft. 6 in. in length, and two rooms 6 ft. 4 in. in width by 9 ft. 6 in. in length each. With 6½ ft. side walls it is 9 ft. 10½ in. from floor to top of gable. With 7½ ft. side walls it is 10 ft. 10½ in. from floor to top of gable. It is seldom, if ever, during the past few years that we have sold this house with 6½ ft. side wall panels. The very small increased cost for the 7½ ft. walls over the 6½ ft. cuts but very little figure when taken into consideration the 7½ ft. walls allow for the proper pitch for a porch roof, besides giving a more pleasing proportion, better ventilation inside, and a much improved appearance to the house viewed from the outside.

We sell a great many of these for hunting, fishing and golf clubs. When used as such, the purchaser as a rule orders it with a porch around the entire house, in which case the house **must have 7 ft. 6 in. high side wall panels.**

This house is the same as the No. 05 3-room cottage in every detail as regards **interchangeable** side wall panels, roof, windows, doors, partitions, floor, veranda sections, outside blinds, screens, etc.

For full particulars regarding its construction, see description of No. 05 3-room cottage, page 22.

Think of it! This house can be erected in less than a day. No carpenter necessary; all the tools required for erecting the house are a screw driver and wrench. All the annoyance of building saved; not only this, but a large per centage in cost of labor and materials.

No. 05 M. & M. PORTABLE COTTAGE (4 rooms). Size 12 ft. 8 in. in width by 31 ft. 8 in. in length. One room 12 ft. 8 in. by 12 ft. 8 in.; one room 9 ft. 6 in. by 12 ft. 8 in.; two rooms 6 ft. 4 in. by 9 ft. 6 in. Showing fancy ridge board, fancy gable ornaments and outside blinds. The outside blinds, as shown in this cut, are **extra,** and not included **in our regular quotation on this house. We furnish them at an additional cost. We can furnish this house with porch at an additional cost.** **See pages 28 and 29.**

OUR No. 05 5-room M. & M. cottage is an ideal one for an inexpensive, comfortable as well as ornamental summer resort home for the lake, seaside or mountains. It is made entirely of a good grade of white pine, and primed with one coat of paint outside. Size of house, 12 ft. 8 in. in width by 31 ft. 8 in. in length; with one room 12 ft. 8 in. square, and four rooms 6 ft. 4 in. in width by 9 ft. 6 in. in length each. With 7½ ft. side walls it is 10 ft. 10½ in. from floor to top of gable.

This house is the same as the No. 05 3-room cottage in every detail as regards **interchangeable** side wall panels, roof, windows, doors, partitions, floor, veranda sections, outside blinds, sceens, etc.

For full particulars regarding its construction, see description of No. 05 3-room cottage, page 22.

Think of it! This house can be erected in less than a day. No carpenter necessary; all the tools required for erecting the house are a screw driver and wrench. All the annoyance of building saved; not only this, but a large per centage in cost of labor and materials.

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.

No. 05 M. & M. PORTABLE COTTAGE (5 rooms). Size 12 ft. 8 in. in width by 31 ft. 8 in. in length. One room 12 ft. 8 in. by 12 ft. 8 in ; four rooms 6 ft. 4 in by 9 ft. 6 in. Showing fancy ridge board, fancy gable ornaments and outside blinds. The outside blinds, as shown in this cut, are **extra**, and not included in our regular quotation on this house. **We furnish them at an additional cost. We can furnish this house with porch at an additional cost.** **See pages 28 and 29.**

The above cut shows our No. 05 4-room 7½ ft. high side wall Portable House with our latest designed Portable Porch across one end and side. Depth 6 ft. 4 in. Height at posts 6 ft. 4 in. Roof pitch of the porch 10 in. Size of posts 4x4 in..

Please note the workman standing on the extreme left on the side porch is 6 ft. tall.

Our porches are so constructed that the end porch may be attached on either end of the house and the side porch may be attached on either side of the house. If desired we can furnish a porch for one end only, one end and side as shown in cut, two ends and side or around the entire house. The porch roof, the same as that of the house, is constructed with wooden panels, canvas covered and painted.

The floor is ⅞ in. matched pine made in movable sections.

We ship our porches complete in every detail with exception of the foundation,

We furnish purchashers full printed instructions for erecting the porches.

NOTE. The porches cannot be used on any of our houses that have side walls less than 7½ ft. high.

The above cut shows our No. 05 7½ ft. high side wall Portable House with our latest designed portable porch attached to the gable end, The length of porch is 12 ft. 10½ in. Depth 6 ft. 4 in. Height at posts 6 ft. 4 in.
This porch is so constructed that it can be attached to either end of the house. For further particulars see page 28.

NOTE. This porch cannot be used on any of our houses that have side walls less than 7½ ft. high.

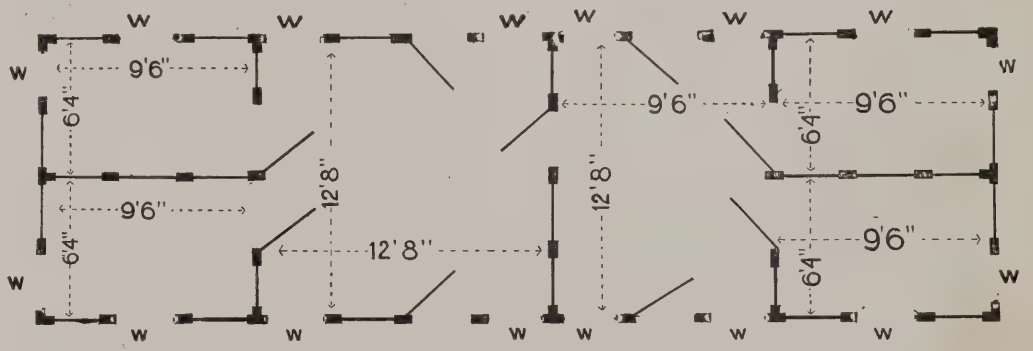
OUR No. 05 6-room M. & M. cottage is the same in all its details as our No. 05 5-room cottage, with the exception that it has three more panels (9 ft. 6 in.) added to its length, making the house 12 ft. 8 in. wide by 41 ft. 2 in. in length, thus giving four rooms 6 ft. 4 in. in width by 9 ft. 6 in. in length each, one room 12 ft. 8 in. in width by 9 ft. 6 in. in length, and a living room 12 ft. 8 in. square. It is made entirely of a good grade of white pine primed with one coat of paint outside. Owing to its length, we invariably build this house with 7½ ft. side wall panels, which gives 10 ft. 10 in. from floor to top of gable. This house is the same as our No. 05 3-room cottage in every detail, as regards **interchangeable** side wall panels, roof, windows, doors, partitions, floor, veranda sections, outside blinds, screens, etc.

For full particulars regarding its construction, see description of our No. 05 3-room cottage, page 22.

Can you believe it? This house can be erected in a day; no carpenter necessary; all the tools required for erecting the house are a screw driver and a wrench. All the annoyance of building saved. Not only this, but a large percentage in the cost of labor and material.

We make this house with double roof and walls, when so desired, at an additional cost. (See page 36.)

DIAGRAM.



Scale ⅛ inch to the foot.

The heavy lines, thus, ▬▬ show the exact positions of the side walls and partition panels.

NOTICE—In your correspondence with us, please specify Catalogue No. 3.

No. 05 M. & M. Portable Cottage (6 Rooms). Size 12 ft. 8 in. in width by 41 ft. 2 in. in length, 7½ ft. side walls. One Room 12 ft. 8 in. by 12 ft. 8 in.; one Room 12 ft. 8 in. by 9 ft. 6 in.; four Rooms 6 ft. 4 in. by 9 ft. 6 in. Showing fancy ridge board, fancy gable ornaments, and veranda sections or wooden awings over the windows. The Veranda Sections or Wooden Awnings, as shown in this cut, are **Extra,** and not included in our regular quotation on this house. We furnish them at an additional cost. We can furnish this house with Porch at an additional cost. (See pages 28 and 29.)

OUR No. 05 3-Room M. & M. PORTABLE PHOTOGRAPH GALLERY is complete in all its details, inexpensive, comfortable and ornamental. Can be easily transported from one location to another by rail, water or wagon. It is made of a good grade of white pine, and primed with one coat of paint outside. Size 12 ft. 8 in. in width by 22 ft. 2 in. in length, with 7½ ft. side walls, and is 10 ft. 10½ in. from floor to point of gable.

The Reception Room as shown in diagram (page 33) is 12 ft. 8 in. in width by 9 ft. 6 in. in length.

The Operating Room is 12 ft. 8 in. square, with a Dark Room 3 ft. 2 in. width by 6 ft. 4 in. in length, in one corner.

The side walls are made in sections 3 ft. 2 in. wide from ¾ in. siding, tongued and grooved, each being a duplicate of the other, and all being **interchangeable.** For shipment these sections are put up in crates or packages of a convenient size for handling and transportation. The solid sections are **interchangeable** with those containing windows and doors, so that the purchaser erecting the house can arrange the location of the windows and doors to suit his requirements. This Gallery when erected is strong, durable, wind and water-proof.

SHOW WINDOW.—The show window is composed of two window panels, each panel having an opening 2 ft. 5⅞ in. by 3 ft. 3 in. Each sash for same being 1⅛ in. thick, glazed with one light 26x34 double strength glass. Inside, attached to these two window panels by hinges, is a wooden shelf 20 in. in width by 6 ft. in length, resting on swing brackets, which may be used for show window display, and, when not in use, this shelf may be dropped by swinging the brackets in against the window panels.

WINDOWS.—The opening for the windows is 2 ft. 5⅞ in. by 3 ft. 3 in. The sash is 1⅛ in. thick, 4-light, glazed with 12x16 glass, divided in the middle and rabbeted, so that each half will swing into the house and back against the side walls. They are hung with loose joint wrought iron butts, half of the butt being attached to the sash, the other half to the window frame, so these parts cannot be lost in transit, and the windows can be easily and quickly adjusted in their proper positions.

DOORS.—The doors are 2 ft. 6 in. by 6 ft. 2 in., 1⅛ in. thick, 5-paneled, complete with steel mortise lock and key, and hung with loose joint wrought iron butts, half of the butt being attached to the door, the other half to the door frame, so that these parts cannot be lost in transit, and the doors can be easily and quickly adjusted in their proper positions.

FLOOR.—The floor is made in sections of ⅞ in. matched pine, laid upon sized and fitted joists, which rest in iron stirrups attached to the sills.

ROOF.—The roof is our new design (see page 25), made of wood covered with canvas and thoroughly painted. Made in sections in sizes easily handled, and when placed in position are tight and rain-proof. They are put up in crates for transportation.

PARTITIONS.—The partitions extend from floor to roof, so that each room is entirely shut off from the other. Upper part of partition conforms to the shape of the roof, making a solid truss support for same. The lower part, which is in sections the height of the side walls, can be removed and replaced at will. The doors for the partitions are 5-paneled and complete with butts and latch.

TOP OR ROOF SKYLIGHT.—This skylight is 9 ft. 6 in. in width by 7 ft. 4 in. in length, extending from the wall plate to the ridge board on one side of the roof: the sash is made for glass 16 in. wide. We do not furnish this skylight glazed. We furnish it complete (except the glass), ready for glazing.

SIDE LIGHT.—This side light is 9 ft. 6 in. in width by 4 ft. 6 in. in height, with three 6-light sash glazed with 13x16 glass, which we furnish complete.

NO NAILS.—No nailing or carpenter work necessary. A screw driver and wrench are all the tools required.

NO CARPENTER.—Any one who follows our instructions can easily and quickly erect this gallery. We send all purchasers printed illustrated instructions.

SCREENS.—We can furnish for this gallery, when desired, wire screens fitted to the windows; also screen doors complete with spring hinges.

OUTSIDE BLINDS.—We can furnish for this gallery outside blinds for the windows complete with fastenings. (See page 25.)

WOODEN AWNINGS OR VERANDA SECTIONS.—We can furnish these, as shown on page 23, when desired.

M. & M. PORTABLE FOLDING BEDS.—We can furnish these as shown on page 35, when desired.

In naming quotation on this gallery, we regularly quote price with 2 windows, 2 show windows and display shelf, 2 doors, 1 partition with door, 1 dark room 3 ft. 2 in. in width by 6 ft. 4 in. in length, with door, fancy ridge board, fancy gable ornaments and galvanized roof joint for stove pipe; top or roof skylight 9 ft. 6 in. wide by 7 ft. 4 in. in length, unglazed.

Side skylight 9 ft. 6 in. wide by 4 ft. 6 in. in height, with three 6-light sash, glazed with 13x16 glass.

One double show window glazed with two lights of 26x34 double strength glass, and swing bracket shelf complete with hinges and brackets 20 in. in width by 6 ft. in length.

Should more windows and doors be desired, we merely substitute a window or door panel in place of the solid panel, at a small additional cost.

WIRE SCREENS FOR THE WINDOWS.—Wire screen doors complete with spring hinges, veranda sections, outside blinds, gable windows and folding beds, are extras and not included in our quotation on this gallery, unless so specified.

We make this Gallery with double roof and double walls at an extra cost. (See page 36.)

Should a larger gallery be needed, we can increase the length by adding more panels, but not the width, as 12 ft. 8 in. is as wide as we manufacture them.

NOTICE.—In your correspondence with us, please specify Caatalogue No. 3.

No. 05 3-Room M. & M. Portable Photograph Gallery. Size 22 ft. 2 in. in length by 12 ft. 8 in. in width.

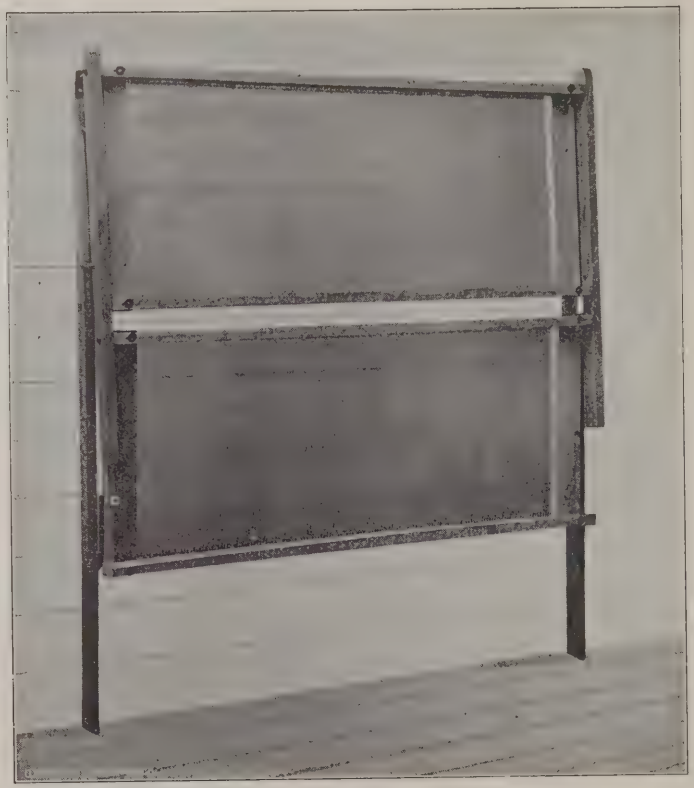
M. & M. DOUBLE FOLDING PORTABLE BEDS.

TO utilize room to the best advantage in the hunters' cabin or the summer cottage, is at times very perplexing as well as annoying, especially for sleeping accommodations. In this respect the Mershon & Morley Portable Folding Bed has come to the rescue. The frame work of the bed is made of well-seasoned hardwood, securely ironed and bolted at the four corners in such a manner as to allow the frame to be opened or closed at will. The frame is equipped with two wire mattresses 6 feet long by 30 inches wide, one for upper part of frame and one for the lower. The frame is made to fasten to the side wall of our houses by means of six screws, and when closed and not in use project only 6 inches into the room, so the occupant can have the entire floor space during the day. You are not obliged to remove the bedding when you close them up. These beds accommodate two persons. They are designed to be set up in the corner so the end or the side wall of the room will form the headboard, thus keeping the pillows in place. (See Hunters' Cabin, page 17.) By referring to the cut on the opposite page it will be seen how convenient for sweeping and cleaning the floor when the beds are closed, besides making room for chairs and table.

NOTICE.—In your correspondence with us, please specify Catalogue No. 3.

OPEN.



CLOSED.

MERSHON & MORLEY DOUBLE FOLDING PORTABLE BEDS, complete with Wire Mattresses. Size 6 feet long by 30 inches wide.

DOUBLE ROOF AND DOUBLE WALL HOUSES.

WHERE a house is desired for occupancy the year around, or in a country subject to extremes of temperature either hot or cold, our **double roof** and **double wall** house meets every requirement.

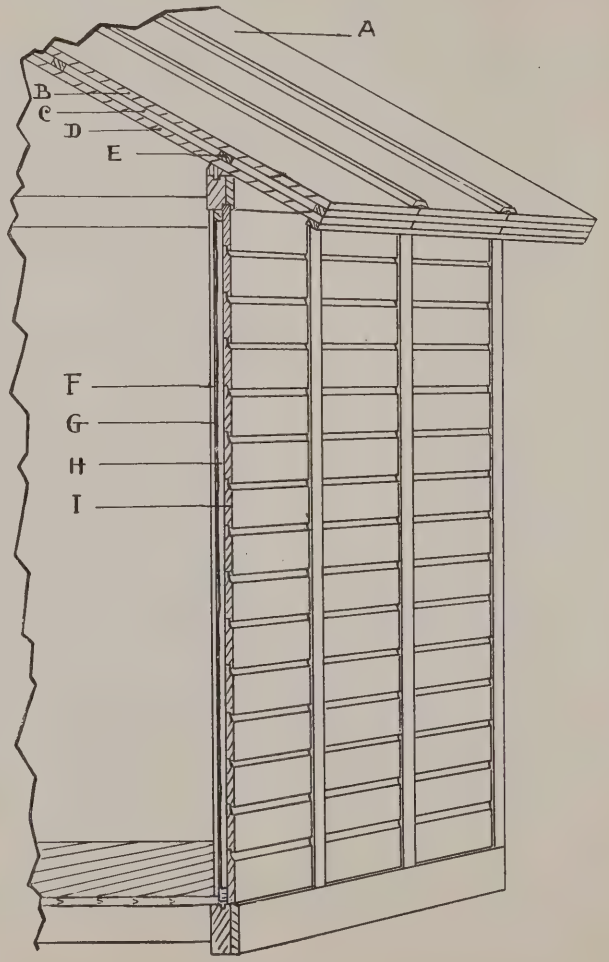
That you may clearly understand the construction of a double roof and double wall house, we show on this page a sectional view illustrating same.

Double Roof.—It is constructed with outside and inside panels, each being made of $\frac{3}{4}$ in. matched white pine, and separated by a $\frac{7}{8}$ in. air space as shown in the cut. The upper, or weather surface of the outside panels is covered with heavy canvas made especially for this purpose and thoroughly painted. "A" represents the painted canvas covering; "B" the outside panels; "C" the $\frac{7}{8}$ in. air space; "D" the inside panels; "E" the cleats separating and staying the upper and lower panels.

Double Walls.—The outside or weather panels are made of $\frac{3}{4}$ in. white pine siding, tongued and grooved; the inside panels are made of $\frac{1}{2}$ in. white pine siding, tongued and grooved, breaking joints with the outside panels, so that the inside and outside joints do not come opposite each other. Between the outside and inside panels there is a $\frac{7}{8}$ in. air space, which is lined with the best grade of moisture-proof building paper, which makes the sides of the house absolutely **wind** and **weather-proof.** "F" represents the inside panels; "G" the moisture-proof paper lining; "H" the $\frac{7}{8}$ in. air space; "I" the outside panels of the double walls.

For Extreme Heat Only.—When protection is desired from extreme heat only, a **double** roof and **single** wall house will meet all requirements.

NOTICE—In your correspondence with us, please specify Catalogue No. 3.



What People Say of the M. & M. Portable Houses.

"Looks Very Fine."

Office of DeNOYELLES & CO.
Brick Manufacturers.

Mershon & Morley Co.,
Saginaw, Mich.

Haverstraw, N. Y., July 12, 1903.

Dear Sirs:—Enclosed find check for No. 03 cabin. It arrived a few days ago. We erected it in half a day and it is now painted and looks very fine. I am now using it for an office at the brick yard, and find it very convenient for the foreman to take his sleep in while burning, instead of going home, which saves him a lot of time and rest.

Yours respectfully, D. DeNOYELLES.

"Value Received for his Money."

THE TWENTY-SIXTH WARD BANK OF BROOKLYN.

Messrs. Mershon & Morley Co.,
Saginaw, Mich.

Brooklyn, N. Y., June 1, 1903.

Gentlemen:—I enclose herewith my check for your invoice of April 25, 1903, which I hope will be as satisfactory to you as the house is to me. Kindly send me another illustrated catalogue, and oblige,

Yours respectfully, J. K. ALEXANDER, Cashier.

"Quite Proud of it."

Messrs. Mershon & Morley, Co.
Saginaw, Mich.

Detroit, June 2, 1903.
193 LaFayette Ave.

Dear Sirs:—Many thanks for hurrying the house along. I feel quite proud of it, and it will save the long storage bill. Many thanks for your promptness. I remain yours,

CLARA A. DURYEA.

"Surprised How Well it Went Together."

Office of CRANDAL, STONE & CO.
Mfrs. Carriage Trimmings and Hardware.

Mershon & Morley Co.,
Saginaw, Mich.

Binghamton N. Y., July 22, 1903.

Gentlemen:—Enclosed please find check to meet your invoice. House came in good condition and is now up, and was surprised to find how well it went together. Yours respectfully,

WM. H. STONE, Vice-Pres.

"Exactly as Represented."

THE FISHER MAIDEN OPERA CO.
Chestnut Street Theatre.

Mershon & Morley Co.,
Saginaw, Mich.

Philadelphia, Pa., Sept. 8, 1903.

Dear Sirs:—You will pardon my seeming neglect to acknowledge the safe arrival of the No. 05, 3-room portable cottage with double roof and double 7½ ft. side walls that I received from you several weeks ago. I found the house exactly as you represented it to be, easily erected. cool in warm weather and warm in chilly days. I have given it two coats of white paint and green trimmings; have also added a rustic porch, and as for the interior I have a fire place in it. The sitting room is papered in nile green and enameled white wood work. The bed room and kitchen have the walls painted. The house is cozy and comfortable, and makes an ideal little home (for summer or winter) nestling amoung the trees and shrubbery. I am delighted with it. In the spring when the grass is green and the flowers are at their best, will send you a photo of my place.

Yours very truly, RUSSELL WAKEFIELD.

"Much Pleased with the House."

CARLOS J. WARD, ATTY. AT LAW.
814 Tacoma Bldg.

Mershon & Morley Co.,
Saginaw, Mich.

Chicago, Ill., July 1, 1903.

Dear Sirs:—Enclosed please find check in payment of the portable golf club house shipped us. We are much pleased with the house.

Yours truly, OAK PARK GOLF CLUB,
By C. J. Ward, Pres.

"Satisfactory in Every Way."

Mershon & Morley Co.,
Saginaw, Mich,

Shields, Pa., Nov. 2, 1903.

Gentlemen:—I enclose a check for the amount of your invoice of Sept. 8th, for the No. 01 child's portable play house. The little house is satisfactory in every way. Very truly yours,

MRS. J. G. PONTEFRACT.

What People Say of the M. & M. Portable Houses.

"Very Agreeably Surprised."

Office of NASHVILLE ROOFING & PAVING CO.
Mershon & Morley Co., Nashville, Tenn., Apr. 6, 1903.
Saginaw, Mich.

Gentlemen:—I have just finished erecting the house. I must say I was very agreeably surprised to find that all sections were so accurately constructed that I could fit them together perfectly without any jointing or trimming whatever, and I am more than pleased with the substantial and beautiful appearance of the completed structure, which looks even better than the picture. Yours very truly,

W. M. LEFTWICH, Jr., Gen'l Mngr.

"Better Than Expected."

Mershon & Morley Co., Tottenville, L. I., N. Y., Aug. 10, 1903.
Saginaw, Mich.

Dear Sirs:—We received the house a couple of weeks ago, and have it up and are living in it. It is perfectly satisfactory, and in fact better in many respects than we expected.

Yours, etc., F. M. SQUIRES.

"Very Much Pleased With It."

ROCHESTER PRINTING CO.
Messrs. Mershon & Morley Co., Publishers Democrat and Chronicle.
Saginaw, Mich. Rochester, N. Y., June 1, 1903.

Gentlemen:—Enclosed please find my check in payment of the enclosed bill. The automobile house is received and I am very much pleased with it.

Yours truly, N. P. POND.

"Perfectly Satisfactory. Have Given it a Good Test."

ALEX. SMITH & SONS CARPET CO.
Silversmiths' Bldg., 131-7 Wabash Ave.
Messrs. Mershon & Morley Co., Chicago, Ill., July 11, 1903.
Saginaw, Mich.

Dear Sirs:—I enclose you herewith my check to settle in full for the No. 05, 4-room cottage which is now set up in good shape, and as far as I can judge is perfectly satisfactory. Have given it a good test as to leakage, as it has rained hard for the past two nights and we have not been able to discover a single leak. In fact, in every way, I consider it perfectly satisfactory, and if you have any prospective Chicago purchasers send them to me for recommendation. Furthermore, I would say that I should judge by the comments of my friends at the lake that you may have several orders for next season. Wishing you every success, I beg to remain, very respectfully,

F. L. HARDCASTLE.

"Extremely Satisfactory in all its Details."

INTERNATIONAL PAPER CO.,
30 Broad st.
Messrs. Mershon & Morley. New York, Dec. 5th, 1902.
Saginaw, Mich.

Gentlemen:—Please pardon the writer's tardy acknowledgement of your last letter, The three-room house shipped by you has been erected and is extremely satisfactory in all its details. Yours very truly,

TOM T. WALLER,
2nd Vice-President.

"The Portable House is very Satisfactory."

THE LONG ISLAND RAILROAD CO.,
Office of the General Superintendent.
Messrs. Mershon & Morley, Long Island City, N. Y., Nov. 10th, 1902.
Saginaw, Mich,

Gentlemen:—I have your letter of Nov. 5th. The portable house is very satisfactory. Yours truly,

W. F. POTTER, General Sup't.

"All You Represented Them to be."

Elk Lodge, Lebanon Lake, Sullivan Co., N. Y., Nov. 6th, 1902.
Messrs. Mershon & Morley,
Saginaw, Mich.

Gentlemen:—I have forgotten whether I sent you a testimonial or not. But after giving 6 of your No. 02 Hunters' Cabins a thorough test, I can recommend them as being all that you represented them to be as a portable, serviceable hunters' home. They are as good as could be.

Yours truly, C. W. CHAPIN.

What People Say of the M. & M. Portable Houses.

"Put Together and Occupied the Same Day Received."

No. 1 West Thirtieth Street.
Messrs. Mershon & Morley, New York City, Dec. 4th, 1902.
Saginaw, Mich.

Dear Sirs:—Replying to your recent letter, it gives me much pleasure to tell you of the satisfaction which the little cottage gave those who occupied it. It gave them a comfortable and tasteful shelter, in much less time and at much less expense than to have undertaken the construction of a similar cottage in the ordinary manner. It was put together and occupied the day it was received, being another advantage of the "ready-made" over the slow work of the ordinary construction of small cottages, when time is an important factor.

For the purpose for which the cottage I bought of you was required, it answers admirably. I cannot find the illustrated catalogue which you sent to me last spring; I wish you would send me another, as I think I will order one of the single room cottages, to be used as a kitchen in connection with the one bought last spring. Very truly yours,

J. CHITTENDEN.

"Double Roof and Double Wall House is Warmer in Cold Weather, and Cooler in Hot Weather than Brick."

Messrs. Mershon & Morley, Prescott, Ariz., Nov, 10th, 1902.
Saginaw, Mich.

Gentlemen:—The No. 05, 4-room cottage, with double roof and double 7½ ft. side wall panels, which I purchased of you in August, I erected myself and have been living in it ever since.

For the benefit of any of your prospective purchasers of one of these houses, I would like to say that you made no misrepresentations of any kind to me as regards the construction and stability of this house. It is warmer in a cold climate, and cooler in a hot climate, than a house built with an 8-inch solid brick wall, from the fact of its double walls and double roof with an air space. We have had several severe wind storms since the house was erected and it stood through without a tremble or shake, and it has given the best of satisfaction.

The house arrived so that we unloaded it Friday noon, and my son and myself erected it alone and stayed in it the first Sunday night following, same being completed. Yours truly,

SETH DAVIS & SON.

"Every Part Fitted According to Specifications."

HUNTINGDON & BROAD TOP MOUNTAIN R. R. & COAL CO.
Office of the General Manager.
Messrs. Mershon & Morley, Huntingdon, Pa., June 9th, 1902.
Saginaw, Mich.

Gentlemen:—In reply to yours of the 7th, I beg to say that the house was received and placed in position without the use of a saw or hatchet, every part fitting according to the specifications sent me, and I must say I am very much pleased, and that everything is very satisfactory.

Yours truly, CARL M. GAGE, Gen'l Mgr.

"Severe Wind Storm Did Not Affect it in the Least."

(Special dispatch to the Baltimore Sun.)

Ellicott City, Md., July 1st, 1902.—An inexpensive but in every way comfortable summer home has just been fitted up by Mr. David M. Fulton, of Baltimore, a mile or so from Ellicott City, on the Columbia road. He is already occupying it with his family. The house was bought ready-made in Michigan. It came in handy sections and was put together by Mr. Fulton and his hired man. It has five ample rooms all on the ground floor. The roof is wood covered with painted canvas, and tongued and grooved sheathing of pine set on end makes the weather boarding. The division walls are of the same material and they afford ample braces for the building, without the necessity for scantling. A severe wind storm broke trees in the neighborhood, but Mr. Fulton's ready-made house was not moved in the slightest degree. Tents were tried last year for the family outing, but they found them unsatisfactory.

"Fully up to Specifications."

Messrs. Mershon & Morley, Baltimore, Md., July 9th, 1902.
Saginaw, Mich.

Gentlemen:—Enclosed you will find check in settlement of the enclosed bill. My house (5 rooms arrived in good order and was erected with very little trouble in a day and a half. I am very much pleased with the house, and find it fully up to the specifications. Yours truly,

D. M. FULTON.

(Mr. Fulton is of the firm of Carlin & Fulton, hardware merchants, of Baltimore, Md.)

What People Say of the M. & M. Portable Houses.

"Will Certainly Recommend Your Houses to Any Friends."

1320 Fourth Ave.
Messrs. Mershon & Morley, Louisville, Ky., Oct. 12th, 1902.
Saginaw, Mich.

Gentlemen:—Enclosed find my check in payment for the portable cottage. I will certainly recommend your houses to any friends who need one of the kind. Yours truly,

MRS. E. V. WILDER.

"Is the Curiosity of the Town."

Mershon & Morley, Gulfport, Miss., Nov. 30th, 1902.
Saginaw, Mich.

Gentlemen:—The house has finally reached me. It went together without any trouble and is the curiosity of the town. With a gasoline stove for cooking and an oil heater for warmth, we exist in more comfort than heretofore. Yours truly,

CHAS. W. EATON.

(Mr. Eaton is of the National Dredging Co., Mobile, Ala., and Wilmington, Del.)

"A Desirable Acquisition to my Place."

Messrs. Mershon & Morley, Cleveland, Ohio, June 19th, 1902.
Saginaw, Mich.

Dear Sirs:—Your yesterday's favor received. I am very much pleased with the portable house I purchased from you, which I am using as a servants' lodge at my summer residence, and I think the servants are more pleased with it than I am, if this be possible. A number of my friends have seen it, who say it makes a desirable acquisition to my place.

Your truly, H. P. McINTOSH.

(Mr. McIntosh is president of the Guardian Trust Co. of Cleveland.

"Received, Erected and Very Satisfactory."

Washington, D. C., Sept. 8th, 1902.
Messrs. Mershon & Morley, Saginaw, Mich.

Gentlemen:—Your portable house, No. 02, has been received and erected and is very satisfactory. Very truly yours,

W. E. SPEIR.

(Mr. Speir is a contractor and builder.)

"It is Very Satisfactory."

South Haven, Mich., June 2nd, 1902.
Messrs. Mershon & Morley, Saginaw, Mich.

I enclose check for the balance due on the portable house which you sent me, and which has been received and set up, It is very satisfactory.

Yours truly, CHARLES A. BROWN.

"Much Admired by Every One in Camp."

Lake Side Camp, Higgins Lake, Mich., Aug. 6th, 1902.
Mershon & Morley, Saginaw, Mich.

Gentlemen:—I have the portable house purchased from you set up and ready for occupancy. It is painted white inside and out and looks very pretty among the tall pines and Norways, and is much admired by every one in camp. I had to have something that could be put up quickly, and without the aid of carpenters; this proved to be just the thing, and I am much pleased with it. My brother and I erected the house. I enclose a picture of the cottage, which may interest you. Yours truly,

GEORGE H. BOYD.

"Easy to Put Up and Take Down."

(Seymour, Conn., Record, Thursday, Oct. 9th, 1902.)

C. E. Fairchild had a carriage house put up yesterday near his handsome residence on Washington Ave. The new building which is of ample width for two carriages and of good length, is something new here in the manner of its construction. It was made in sections in Michigan, and is much like the buildings made for hunters' lodges, in convenient sections for transportation, and easy to put up or take down.

"More Than Fulfills my Expectations."

Messrs. Mershon & Morley, Detroit, Mich., Dec. 11th, 1902.
Saginaw, Mich.

Gentlemen:—The No. 04 two-room M. & M. portable house ordered from you came promptly and is in use in my back yard as a play house for my boys. It is very satisfactory indeed, and in appearance, strength and general construction more than fulfills my expectations as gathered from your catalogue description. Very truly yours,

H. C. POTTER, JR.

(Mr. Potter is Vice-President of the State Savings Bank of Detroit.)

"It is a Great Source of Joy to the Little Ones."

Walnut Hills, Cincinnati, Ohio, April 28th, 1902.
Messrs. Mershon & Morley, Saginaw, Mich.

Gentlemen:—On the 26th inst. I received notice from the C. H. & D. R. R. that a portable house had arrived here consigned to me. The same has been delivered and set up and is a great source of joy to the little ones. I enclose check to your order in payment of your bill, which please receipt and return to Yours truly, HOWARD S. WINSLOW.

(Mr. Winslow is president of the Arctic Ice Co. of Cincinnati.

"The Play House Gives Great Satisfaction."

The Larches, Irvington-on-Hudson, N. Y., Dec. 21st, 1902.
Messrs. Mershon & Morley, Saginaw, Mich.

Dear Sirs:—Will you kindly send me another of your illustrated catalogues of portable houses. The play house gives great satisfaction.

Yours truly, J. H. WHITEHOUSE.

"Very Much Pleased; will Recommend them to Friends."

Office of MORAN BOLT & NUT MFG. CO.
St. Louis, Mo., June 10th, 1902.
Messrs. Merhson & Morley, Saginaw, Mich.

Gentlemen:—I received the portable house in good shape and was very much pleased with it, and today enclose check in payment for same, which please acknowledge receipt.

I have shown the house to a number of my friends and think two have made up their minds to buy one each. Please send me another catalogue and instructions for putting up the house, as I have mislaid mine and would like to be able to show these gentlemen the different kind of houses you manufacture. Respectfully, L. MORAN.

"The House is all O. K."

Messrs. Mershon & Morley, Saginaw, Mich. Seymour, Conn., Oct. 25th, 1902.

Dear Sirs:—The house you sent me is all O. K. and answers my purpose well. Yours truly, C. E. SEYMOUR.
